SIZING A 2400 TOUCH OVERLAY

The NextWindow 2400 touch overlay fits snugly over most standard display enclosures and comes in sizes to accommodate many commercial displays from 32" to 65". A fit list of known displays can be downloaded from the partner site at: www.nextwindowusa.com/partner/.

Installation of 2400 touch overlay

If the display is not on the fit list, you can determine the "best" fit by comparing the outside dimension of the display (without speakers and stands) to the "largest

dimension" listed for each size. The general rule of thumb is to find an overlay that is no more than 3/4" larger than the outside dimension of the display. This insures that the touch overlay does not have a visible gap between the frame and the display and is covered by the width of the frame.

Measuring the display

SIZING TIPS

- Use outside dimension exclusive of speakers and stand
- Desk stands some times interfere with touch frame
- Velcro straps secure overlay to display
- Custom sizes are available subject to minimum order quantities
